THE DOSER^{mini}

MULTI-PURPOSE DOSING & INFUSION VESSEL

One of the biggest concerns in most breweries is the danger of climbing a ladder to the top of a fermenter, and, with one hand pour hops through a small opening. In addition to safety, this way of adding hops or other ingredients makes it difficult to sufficiently mix in the added hops/ingredients. The **DOSER^{mini}** Multi-Purpose Dosing and Infusion Vessel makes adding hops and other ingredients easier and safer for the brewer and provides better control over the final product.

STANDARD FEATURES

- Available in 1 HL and 2 HL capacity
- 1 HL unit, 20" diameter 52" high and 33" max width at castors
- 2 HL unit, 24" diameter 63" high and 38" max width at castors
- Removable candle filter (filter screen can be changed for desired application)
- CIP arm complete with sprayball and pressure gauge assembly
- Top glass manway
- Capable of full CO₂ purge – bottom and top ports
- Pressure vacuum relief valve for safety
- Lower tangential recirculation port
- Upper rotating recirculation port
- Will accommodate a variety of ingredients and adjuncts, including whole or pellet hops, spices, botanicals, fruits, coffee etc.

BENEFITS

- Far safer method for both the brewer and the beer
- Better hop utilization; less hop use
- Small and portable
- Sanitary design
- Quick efficient blending
- Less effluent produced
- Better flavour profile
- Multiple uses
